Practical: Data Structures and File Processing

NOTE:

- All the concepts of programs from Text Book including exercises must be practice, execute and write down in the practical record book.
- Faculty must take care about UG standard programs it should be minimum 25 30.
- In the external lab examination student has to execute at least three programs with compilation and deployment steps are necessary.
- External Viva-voce is compulsory.

Example programs:

- 1. Write C++ programs to implement the following using an array
 - a) Stack ADT
 - b) Queue ADT
- 2. Write a C++ program to implement Circular queue using array.
- 3. Write C++ programs to implement the following using a single linked list.
 - a) Stack ADT
 - b) Queue ADT
- 4. Write a C++ program to implement Circular queue using Single linked list.
- 5. Write a C++ program to implement the double ended queue ADT using double linked list.
- 6. Write a C++ program to solve tower of hanoi problem recursively
- 7. Write C++ program to perform the following operations:
 - a) Insert an element into a binary search tree.
 - b) Delete an element from binary search tree.
 - c) Search for a key in a binary search tree.
- 8. Write C++ programs for the implementation of BFS and DFS.
- 9. Write a C++ program that uses non-recursive functions to traverse a binary tree.
